CLAYTON MARK #5451 YARD HYDRANTS

High quality construction features of the Clayton Mark Hydrant: Heavy cast iron head assembly with a 3/4" brass discharge hose fitting -- Heavy zinc plated steel riser pipe that is corrosion resistant -- Galvanized steel operating rod -- Long lasting Buna-N rubber plunger with a solid brass core -- Integral valve seat that is cast into a bronze valve body. Valve body has a 3/4" female iron pipe thread with six flow channels built into the bottom of the valve for better flow and less debris blockage -- Valve body has a 1/8" FPT drain hole (use a 1/8" Brass street ell & a 1/8" x 2" brass nipple pointed in a downward direction to assist good hydrant drainage) -- Hydrants are fully adjustable and are rated to 80 psi -- Packing is Teflon filled graphite. When selecting hydrant, keep in mind that the overall length of a hydrant is 30" longer than the bury depth -- These standard 3/4" hydrants have a 3/4" FPT inlet at the base of the valve body, use 1" galvanized steel riser pipe and a 3/4" male hose thread connection on the hydrant head. The flow rate of standard hydrants is approximately 45 gallons per minute at 50 psi.

Price	Bury Depth	Overall Length	Weight	Able to Ship UPS	Our Number
\$ 76.25	3/4" x 3' Bury	66"	17.8 lbs	Yes / \$ 33.00	34x3CMHYD
