THE ARGENTINE AERMOTOR WINDMILL

Since 1892, Argentina has been one of the largest windmill markets in the world and one of Aermotor's largest export customers. In 1952, however, the Argentine importer of Aermotor windmills began its own production of Model #702 Aermotor windmills in its own facility --- Fabrica de Implementos Agrícolas S.A. (FIASA) in Buenos Aires.

**MADE IN
ARGENTINA**

Parts are interchangeable with any Model #702 manufactured since the early 1930's

While these events were going on in South America, Aermotor production in the United States was undergoing changes. In 1964 the company closed its old Chicago factory and moved its operation to Broken Arrow, Oklahoma, but there they experienced difficulties in securing satisfactory castings. Soon Aermotor began contracting for castings produced by FIASA, the Argentine licensee, and then in 1968 the entire manufacturing process ceased in the United States, with all Model #702 windmills being imported from the South American licensee.

For over a decade all new Aermotor windmills sold on the American market continued to be manufactured by Fiasa in Buenos Aires. And in fact, as an Aermotor distributor since 1965, our company stocked and sold the Fiasa windmill under the Aermotor trade name during this same 12 year period. In 1981 Aermotor introduced its new Model #802 windmills produced in Conway, Arkansas. The Argentine Model #702 windmills sold under the FIASA brand name, however, also have remained on the American market. Thus today one may purchase either the new Model #802 Aermotor windmill manufactured in San Angelo, Texas or the time tested Model #702 Fiasa windmill produced in Argentina.
